DETAILED ACTION

Applicant is notified that claim 22 is not grouped below due to improper dependency on itself. Therefore claims 1-21, 23 and 24 are subject to election/restriction.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-17, drawn to an artificial chromosome vector comprising essentially entire genome of an EHV strain, classified in class 536, subclass 23.1.
- II. Claims 18-20, drawn to a method for generating infectious EHV, classified in class 435, subclass 91.4.
- III. Claims 21, drawn to a method for generating an attenuated EHV, classified in class 435, subclass 440.
- IV. Claims 23 and 24, drawn to a method for generating a virulent EHV, classified in class 435, subclass 475.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and inventions II-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the claimed artificial chromosome vector comprising essentially entire genome of an EHV strain may be used in the claimed methods for generating EHV, or the methods used to generate

Application/Control Number: 10/772,806 Page 3

Art Unit: 1648

EHV can be utilized in generating an alternate alpha-herpesvirus. Because the claimed product may be used in alternative methods, they are distinct from the claimed methods.

Inventions II and inventions III and IV are directed to related methods of generating EHV. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the different inventions are not disclosed as capable of being used together because invention II is drawn to a method for generating infectious EHV, while inventions III and IV are drawn to a method for generating molecularly modified EHV. The difference also provides the different inventions with distinct objectives. Invention II also has a different purpose of use than inventions III and IV. This results because the different inventions are designed to have different effects. Therefore, invention II is unrelated to inventions III and IV.

Inventions III and IV are directed to related methods of generating molecularly modified EHV. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the different inventions are not disclosed as capable of being used together because invention III is drawn to a method for generating

Application/Control Number: 10/772,806

Art Unit: 1648

attenuated EHV, while invention IV is drawn to a method for generating virulent EHV.

The difference also provides the different inventions with distinct objectives. Invention III also has a different purpose of use than invention IV. This results because the different inventions are designed to have different effects. Therefore, invention III is unrelated to invention IV.

Claims 1-17 are generic to the following disclosed patentably distinct species: a strain of EHV present in artificial chromosome as recited in claims 2-4, additionally, a removed glycoprotein of the virus as listed in claims 6-16. The species are independent or distinct because a strain of EHV is physically, functionally and chemically different from a glycoprotein. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Application/Control Number: 10/772,806 Page 5

Art Unit: 1648

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin P. Blumel whose telephone number is 571-272-4960. The examiner can normally be reached on M-F, 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-1600. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
